	SR-S↑	SR-AS↑	SR-S↑	SR-AS↑	SR-S↑	SR-AS↑	SR-S↑	SR-AS↑
WISE	33.91	28.22	0.10	0.00	23.39	19.15	0.00	0.00
MELO	15.24	12.67	13.80	11.49	5.44	4.44	2.42	2.02
ARK	40.84	34.02	35.73	29.86	38.31	32.06	23.99	21.98

Table r8. Performance with **Mistral-7B** measured by SR-S and with **SR-AS** in MQC (1948 edits), SMQC (1948 edits) on PEAK-CF and MAC (1984 edits), SMAC (1984 edits) on PEAK-T.

METHOD	PEAK-CF				PEAK-T			
	MQC		SMQC		MAC		SMAC	
	SR-S $\uparrow$	SR-AS $\uparrow$	SR-S $\uparrow$	SR-AS $\uparrow$	SR-S $\uparrow$	SR-AS $\uparrow$	SR-S $\uparrow$	SR-AS $\uparrow$
WISE	38.96	32.44	0.00	0.00	19.25	16.43	0.00	0.00
MELO	16.94	14.12	7.60	6.30	7.86	6.65	5.75	4.84
ARK	<b>43.94</b>	<b>36.76</b>	<b>22.33</b>	<b>18.58</b>	<b>34.80</b>	<b>30.04</b>	<b>31.75</b>	<b>27.42</b>

Table r9. The comparison of GSR, LSR between ARK without  $l_o$  and ARK in non-compositional ME with 100 edits of PEAK-CF, and the comparison of **PSR** between ARK without  $l_o$  and ARK in non-compositional ME with 100 edits of MQuAKE.

METHOD	GSR $\uparrow$	LSR $\uparrow$	PSR $\uparrow$
ARK- $l_o$	82.00	54.21	53.23
ARK	<b>82.00</b>	<b>54.53</b>	<b>54.52</b>

Figure r1. The sensitivity analysis for the hyperparameter  $k$  on PEAK-CF and PEAK-T. The variation trend of SR-S with respect to  $k$  is similar in different datasets.  $k$  is not sensitive across different datasets.

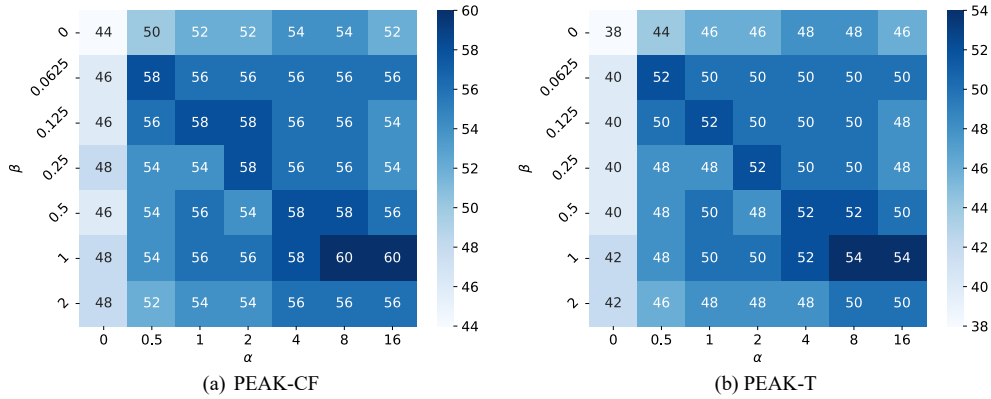

Figure r2. The sensitivity analysis for the hyperparameters  $\alpha$  and  $\beta$  on PEAK-CF and PEAK-T. ARK is not sensitive to the selection of  $\alpha$  and  $\beta$ . The variation trends of SR-S with respect to  $\alpha$  and  $\beta$  are similar in different datasets.  $\alpha$  and  $\beta$  are not sensitive across different datasets. Setting  $\alpha$  to be 8 times  $\beta$  often leads to the best performance.

Figure r3. The sensitivity analysis for the hyperparameter  $p$  on PEAK-CF and PEAK-T. ARK is not sensitive to the selection of  $p$ . The variation trend of SR-S with respect to  $p$  is similar in different datasets.  $p$  is not sensitive across different datasets.

Figure r4. The sensitivity analysis for the hyperparameter  $\gamma$  on PEAK-CF and PEAK-T. ARK is not sensitive to the selection of  $\gamma$ . The variation trend of SR-S with respect to  $\gamma$  is similar in different datasets.  $\gamma$  is not sensitive across different datasets.

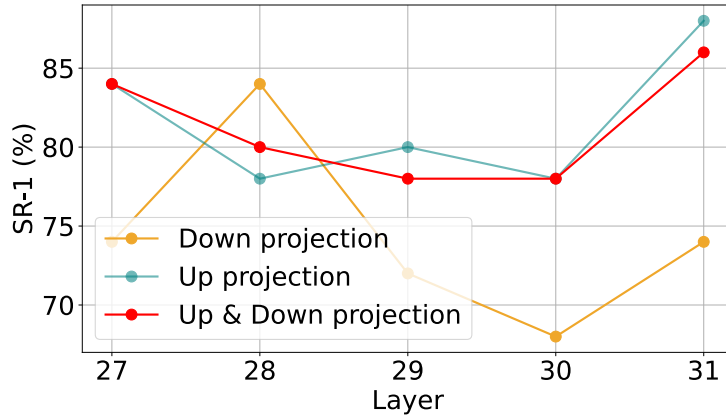

Figure r5. Performance of non-compositional ME measured by SR-I when editing only  $\mathbf{W}_{\text{down}}$ , only  $\mathbf{W}_{\text{up}}$ , both  $\mathbf{W}_{\text{up}}$  and  $\mathbf{W}_{\text{down}}$  in different layers.

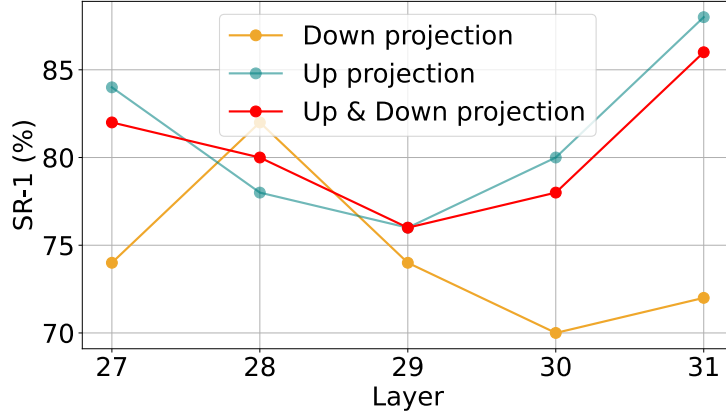

Figure r6. Performance of non-compositional ME measured by SR-1 when editing only  $\mathbf{W}_{\text{down}}$ , only  $\mathbf{W}_{\text{up}}$ , both  $\mathbf{W}_{\text{up}}$  and  $\mathbf{W}_{\text{down}}$  in different layers with fake relations and answers.

Figure r7. The comparison of LSR between ARK and baselines in non-compositional ME with 100 edits of PEAK-CF.

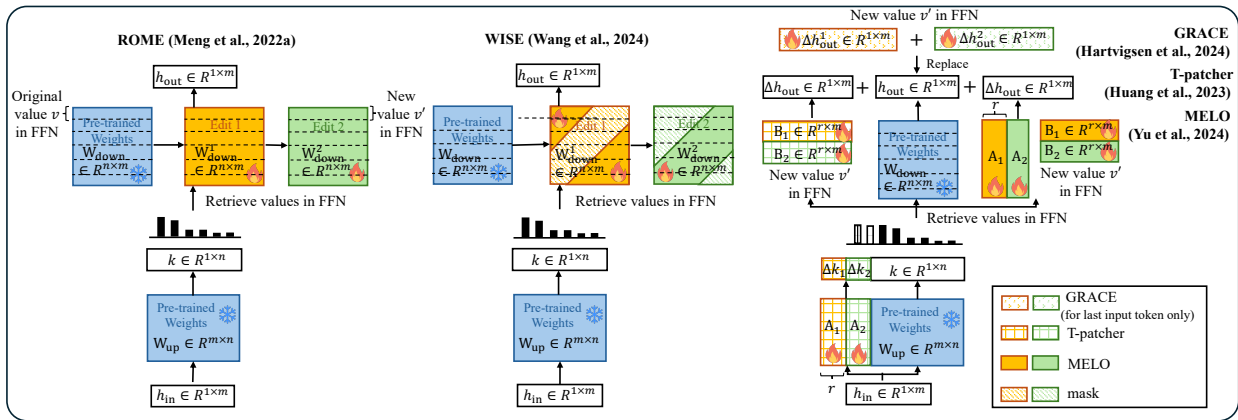

Figure r8. The visualization of different baselines. ROME and WISE overwrite the value  $v$  in  $\mathbf{W}_{\text{down}}$  at the original key  $k$  while GRACE, T-patcher, and MELO add new values  $v$  for  $\mathbf{W}_{\text{down}}$ . ROME and WISE edit the  $\mathbf{W}_{\text{down}}$  with/without gradient mask. GRACE, T-patcher, and MELO edit the  $\mathbf{W}_{\text{down}}$  in different low-rank forms. Note that GRACE edits only the last input token, while others edit all tokens.
